

b.) Amendments to the Specification

Amend the paragraph beginning on page 22, line 14 to read as follows:

"Examples of suitable containers which are also clean-burning, i.e., burning with 15 negligible smoke or odor, are the 4-6 oz size of injection molded polypropylene tubs (e.g., part numbers 451 and S651, Airlite Plastics Company; Omaha, NE, which are both made from plastics whose total resin content is at least 99 percent pure, containing less than one percent of inorganic materials.). An example of a suitable alcohol fuel is: 70% by weight alcohol including 54% by weight ethanol, 16% isopropanol, 30% water, and 0.3% Carbopol®Ultrez 10 polyacrylate thickener (BFGoodrich Specialty Chemicals, Cleveland, OH), providing a kinematic viscosity of 15,000-30,000 cp. In other embodiments, the viscosity may be as low as 250 cp and as high as 100,000 cp, or even fully gelled."
